Subject: Attestation of Penetration Testing Services for ScreenSteps

Netragard, Inc. hereby attests to the completion of Gold Penetration Testing Services for ScreenSteps starting April 22, 2024 and ending May 15, 2024.

Netragard appointed an expert penetration tester with extensive experience in offensive security for both Web Application and API penetration testing. The assessment was carried out using Netragard's Real Time Dynamic Testing™ methodology against the targets provided by ScreenSteps.

The key objective of the engagement was to identify vulnerabilities that could be exploited to impact the confidentiality, integrity, and availability of ScreenSteps' data.

All findings were documented in a formal report along with their respective methods for remediation.

A retest of all remediated items was subsequently conducted on August 9, 2024 and remediated items were noted in an updated version 2.0 of the report.

Sincerely,

Adriel T. Desautels
Chief Executive Officer
Netragard, Inc.
